

## No Dependency Inject Code

```
class Service{}

class MyClass{
  service :Service
  constructor(){
    this.service = new Service();
  }

  add(){
    this.service
  }
}
let sr = new Service();
let my = new MyClass();
```

## Dependency Inject Code

```
class Service{}

class MyClass{
  service :Service
  constructor(service:Service){
    this.service = service;
  }

  add(){
    this.service
  }
}
let sr = new Service();
let my = new MyClass(sr);
```

## Dependency Inject Code Alternative Syntax

```
class Service{}

class MyClass{

    constructor(private service:Service){}

    add(){
        this.service
    }
}

let sr = new Service();
let my = new MyClass(sr);
```
