

The process followed when creating a Minimum Viable Product (MVP) within our organization adheres to the following steps:

- **Initial Requirement Gathering:** We commence by conducting a comprehensive initial requirement gathering phase, during which we identify and document the fundamental needs and objectives of the project.
- **Non-Disclosure Agreement (NDA) and Non-Compete Agreement (NCA) Signoffs:** Prior to sharing any confidential information or project details, we require all involved parties to sign NDA and NCA agreements to protect sensitive data and intellectual property.
- **Ballpark Cost Estimations and Proposal:** Subsequently, we provide a preliminary estimate of project costs and submit a detailed proposal outlining the scope, timeline, and deliverables for client review and approval.
- **Contract Sign-off:** Once the proposal is accepted, we proceed to the contract negotiation and signing phase, formalizing the terms and conditions of the project engagement.
- **Project Execution:** After contract sign-off, our team initiates the project's execution phase, where we implement the agreed-upon plan, develop the MVP, and continuously monitor progress to ensure alignment with the project objectives.
- **Delivery:** The final phase involves the delivery of the MVP to the client, meeting all defined specifications, and ensuring a seamless transition for further development or utilization.

This structured approach ensures a clear and systematic progression from initial concept to the successful delivery of the MVP, fostering transparency and accountability throughout the entire process.
